

Visual Display Signs

Valcom's IP Power over Ethernet (PoE) Visual LED Displays are vital to an organization's ability to broadcast visual and voice message alerts for daily or emergency communications. Valcom's Visual LED Displays can provide flashing visual alerts to gain immediate attention from individuals in the area. The Visual LED Displays can also provide audible alerts to direct attention to the displayed message. The messages can be colored coded and scroll to provide easy-to-read alerts and notifications. Valcom Visual Display Signs are ideal for schools/campuses, manufacturing plants, healthcare facilities, corporate buildings, government and military facilities and more.

Features & Advantages

ADA Compliant

Reach individuals through visual messaging.

Visual and Audio Notification

Send visual and audio information to different areas of your organization.

Clock/LED Capable

LED displays are capable of serving as a clock, but switch to an endpoint during emergency situations.
