Strobes

Valcom's Strobes allow you to provide visual notifications to individuals within your organization, when audible alerts aren't practical. Strobe lights provide suitable signaling for evacuations and other alerts that aid in guiding and protecting individuals. Valcom's stobes are ideal for corporate applications, educational institutions, entertainment complexes, industrial facilities, government buildings, healthcare facilities, transportation terminals or anywhere the need for critical alerts/public address exists.

Valcom's Auxiliary Relay Units are used for strobe activation, door and camera control and are used in conjunction with the V-5580041C. The Relay Unit is expandable to 6 relays by adding an expansion board.

Features & Advantages
